First Edition

How This Bonus Was Built

These 30 questions are not a random sample. They are weighted to approximate the real Praxis Core Combined Test (5752) section proportions: the official test spans 152 selected-response questions across Reading, Mathematics, and Writing, so this bonus mirrors that split with 11 Reading, 11 Mathematics, and 8 Writing questions.

Within each section, the question types reflect what the real Praxis Core tests most: main idea, inference, and vocabulary in context on short passages in Reading; algebra, geometry, ratios, data analysis, and estimation in Mathematics; and usage, mechanics, sentence structure, and research/citation basics in Writing.

Every question below includes a full explanation: why the correct answer is right, and why each of the other choices is wrong. That second part is what most practice sets skip — and it's usually where the actual learning happens.

Reading

Question 1 | Main Idea

Passage: New teachers often assume that classroom management is primarily about discipline — correcting misbehavior after it happens. Experienced teachers, however, tend to describe it differently: as the design of routines and expectations that prevent most disruptions before they start. A veteran teacher who spends the first weeks of school explicitly teaching how to line up, pass in papers, and ask for help is not wasting instructional time; she is investing it.

What is the main idea of the passage?

- A. New teachers are less effective than experienced teachers.
- B. Effective classroom management focuses on preventing disruptions through routines, not just correcting misbehavior.
- C. Teaching students how to line up wastes valuable instructional time.
- D. Discipline should be the primary focus of classroom management.

Correct Answer: B

The passage contrasts a reactive view of classroom management (correcting misbehavior) with a proactive one (designing routines that prevent disruptions), and argues the proactive approach is more effective — that contrast is the main idea. Choice A overgeneralizes; the passage compares two views of classroom management, not teachers' overall effectiveness. Choice C directly contradicts the passage, which says this time is “invested,” not wasted. Choice D describes the view the passage argues against, not its main point.

Question 2 | Inference

(Refers to the same passage as the question above.)

Based on the passage, what can be inferred about the veteran teacher's use of the first weeks of school?

- A. She believes discipline is unnecessary in a well-run classroom.
- B. She spends most of her time addressing misbehavior after it occurs.
- C. She avoids teaching routines so students can learn them independently.
- D. She considers early routine-building essential to preventing future disruptions.

Correct Answer: D

The passage explicitly frames her time spent teaching routines as an investment tied to preventing disruptions, supporting the inference that she sees early routine-building as essential. Choice A overstates the passage, which never claims discipline is unnecessary — only that prevention is emphasized. Choice B contradicts the passage's description of her proactive approach. Choice C contradicts the passage, which says she “explicitly teaches” routines rather than leaving students to learn them alone.

Question 3 | Vocabulary in Context

(Refers to the same passage as the question above.)

As used in the passage, the word “investing” most nearly means:

- A. using productively for future benefit
- B. wasting
- C. donating
- D. postponing

Correct Answer: A

“Investing” here means using the time productively in a way that pays off later (preventing future disruptions), matching “using productively for future benefit.” Choice B is the opposite of the intended meaning — the passage explicitly says this time is not wasted. Choice C introduces a meaning (giving something away) unrelated to the sentence. Choice D suggests delay, which does not match the meaning of actively and productively using the time now.

Question 4 | Main Idea

Passage: A district considering a longer school day pointed to research showing that added instructional minutes correlate with higher test scores. Critics countered that correlation is not the same as causation: districts that can afford longer days often have more resources overall, which could explain the score differences just as easily as the extra time itself. The district ultimately piloted the change in only a few schools before deciding whether to expand it further.

What is the main idea of the passage?

- A. Longer school days always improve test scores.
- B. Test scores are not an accurate way to measure school quality.
- C. A district considered extending the school day but faced questions about whether the evidence truly showed the extra time caused higher scores.
- D. The district decided not to change its school schedule at all.

Correct Answer: C

The passage centers on the district's consideration of a longer day, the correlation-versus-causation objection critics raised, and the cautious pilot approach taken in response — that overall arc is the main idea. Choice A overstates the passage, which raises doubt about causation rather than affirming the claim. Choice B introduces a broader claim about test scores the passage never makes. Choice D contradicts the passage, which says the district piloted the change, not that it rejected it outright.

Question 5 | Detail

(Refers to the same passage as the question above.)

According to the passage, what specific concern did critics raise about the research on longer school days?

- A. Longer school days are illegal in most districts.
- B. Districts with more resources may explain the score differences, not the extra time itself.
- C. Students dislike spending more time in school.
- D. The added instructional minutes did not actually improve test scores at all.

Correct Answer: B

The passage states the critics' specific concern directly: better-resourced districts could explain the score differences "just as easily as the extra time itself." Choice A introduces a claim never made in the passage. Choice C introduces a student-preference concern the passage never mentions. Choice D misstates the critics' argument — they questioned the cause of the improvement, not whether scores improved at all.

Question 6 | Craft & Purpose

(Refers to the same passage as the question above.)

The author's discussion of the district's decision to pilot the change in only a few schools primarily serves to:

- A. suggest that the district took a measured approach given the uncertainty in the research.
- B. criticize the district for being too cautious.
- C. prove that longer school days do not work.
- D. argue that pilot programs are a waste of district resources.

Correct Answer: A

Mentioning the small-scale pilot right after the correlation-versus-causation objection shows the district responding to that uncertainty with a cautious, evidence-gathering approach — supporting choice A. Choice B introduces a critical tone the passage does not take; the passage presents the decision neutrally. Choice C overstates the passage, which never concludes longer days "do not work." Choice D introduces an opinion about pilot programs the passage never expresses.

Question 7 | Vocabulary in Context

In the sentence "The committee's decision was arbitrary, based on no clear criteria or consistent reasoning," the word "arbitrary" most nearly means:

- A. carefully researched
- B. unanimous
- C. legally binding
- D. based on random whim rather than reason or system

Correct Answer: D

"Arbitrary" describes a decision made without a clear reason or system, matching the sentence's own description ("no clear criteria or consistent reasoning"). Choice A is close to the opposite — a carefully researched decision would have clear criteria. Choice B introduces an unrelated meaning about group agreement. Choice C introduces an unrelated legal meaning.

Question 8 | Craft & Purpose

A reviewer writes: "The novel's pacing drags in the middle chapters, though the ending redeems much of what came before." What is the reviewer's overall attitude toward the novel?

- A. Entirely negative
- B. Entirely positive

- C. Mixed, with both a criticism and a point of praise
- D. Indifferent and without any clear opinion

Correct Answer: C

The sentence contains both a criticism (“pacing drags”) and praise (“the ending redeems much of what came before”), making the reviewer’s attitude mixed rather than one-sided. Choice A ignores the praise for the ending. Choice B ignores the criticism of the pacing. Choice D is contradicted by the sentence, which expresses clear, specific opinions on both counts.

Question 9 | Integration of Ideas

“Because Employee A has more years of experience than Employee B, Employee A should be promoted instead of Employee B.” Which unstated assumption does this argument rely on?

- A. Years of experience is the most important factor in deciding who should be promoted.
- B. Employee B has never received positive performance reviews.
- C. Employee A and Employee B work in the same department.
- D. The company has only one promotion available.

Correct Answer: A

The argument moves directly from “more experience” to “should be promoted” without stating why experience should determine the outcome — it relies on the unstated assumption that experience is the most important factor for promotion. Choice B introduces a claim about performance reviews that the argument never relies on. Choice C introduces a detail that isn’t necessary for the argument’s logic to function. Choice D introduces a scarcity assumption the argument doesn’t depend on — it would work the same whether one or several promotions were available.

Question 10 | Main Idea

Passage: Community gardens were once considered a niche hobby, but city planners increasingly treat them as infrastructure. A garden can reduce stormwater runoff, lower nearby summer temperatures, and give residents without yards a place to grow food. Some cities now require new developments above a certain size to include garden space, treating it with the same seriousness as parking or sidewalks.

What is the main idea of the passage?

- A. Parking requirements are more important than garden space in new developments.
- B. Community gardens are increasingly viewed by city planners as a form of practical infrastructure, not just a hobby.
- C. Community gardens have no effect on local temperatures.
- D. Most residents prefer yards to community gardens.

Correct Answer: B

The passage traces a shift in how city planners view community gardens — from a niche hobby to practical infrastructure with real benefits — which is its central point. Choice A reverses the comparison the passage draws, which treats garden space as being taken just as seriously as parking, not less seriously. Choice C directly contradicts the passage, which credits gardens with lowering nearby summer temperatures. Choice D introduces a preference claim the passage never makes.

Question 11 | Vocabulary in Context

(Refers to the same passage as the question above.)

As used in the passage, the word “niche” most nearly means:

- A. mainstream and widely practiced
- B. illegal
- C. a small, specialized interest or activity
- D. expensive

Correct Answer: C

“Niche” describes something appealing to a small, specialized group rather than the general public — matching the passage's contrast between a “niche hobby” and something city planners now treat as broadly important infrastructure. Choice A is nearly the opposite of “niche.” Choice B and Choice D introduce meanings unrelated to the word.

Mathematics

Question 12 | Percent

A school district's budget is \$2,400,000. If 35% of the budget is allocated to teacher salaries, how much money is allocated to salaries?

- A. \$720,000
- B. \$875,000
- C. \$1,560,000
- D. \$840,000

Correct Answer: D

$0.35 \times 2,400,000 = \$840,000$. Choice A results from using 30% instead of 35%: $2,400,000 \times 0.30 = 720,000$. Choice B results from misreading the total budget as \$2,500,000 instead of \$2,400,000: $2,500,000 \times 0.35 = 875,000$. Choice C is 65% of the budget (the remaining, non-salary portion) instead of the 35% allocated to salaries: $2,400,000 \times 0.65 = 1,560,000$.

Question 13 | Rate

A car travels 150 miles in 3 hours at a constant speed. At this same speed, how many miles will it travel in 5 hours?

- A. 250 miles
- B. 200 miles
- C. 375 miles
- D. 300 miles

Correct Answer: A

The rate is $150 \div 3 = 50$ mph, so in 5 hours the car travels $50 \times 5 = 250$ miles. Choice B results from adding only one extra hour's worth of distance ($150 + 50 = 200$) instead of the full two additional hours needed to reach 5 hours. Choice C results from misreading the original time as 2 hours instead of 3, giving a rate of 75 mph: $75 \times 5 = 375$. Choice D results from using 6 hours instead of 5: $50 \times 6 = 300$.

Question 14 | Unit Conversion

A recipe requires 2.5 quarts of water. How many cups is this? (1 quart = 4 cups)

- A. 5 cups
- B. 10 cups
- C. 8 cups
- D. 12 cups

Correct Answer: B

$2.5 \times 4 = 10$ cups. Choice A results from mistakenly using the conversion for pints (1 quart = 2 pints) instead of cups (1 quart = 4 cups): $2.5 \times 2 = 5$. Choice C results from rounding 2.5 down to 2 quarts before converting: $2 \times 4 = 8$. Choice D results from rounding 2.5 up to 3 quarts before converting: $3 \times 4 = 12$.

Question 15 | Algebra

Solve for x : $4x - 7 = 3x + 5$

- A. 12
- B. -2
- C. 2
- D. 5

Correct Answer: A

Subtracting $3x$ from both sides gives $x - 7 = 5$; adding 7 to both sides gives $x = 12$. Choice B results from subtracting 7 (instead of adding it) when isolating x : $5 - 7 = -2$. Choice C results from subtracting the two constant terms directly ($7 - 5 = 2$) instead of correctly isolating x . Choice D is simply the constant term from the right side of the equation (5), mistakenly treated as the answer without solving.

Question 16 | Algebra Word Problem

A tutoring center charges a \$20 registration fee plus \$15 per session. If a family paid \$110 total, how many sessions did they purchase?

- A. 5
- B. 7
- C. 9
- D. 6

Correct Answer: D

Subtracting the fee: $\$110 - \$20 = \$90$. Dividing by the per-session rate: $90 \div 15 = 6$ sessions. Choice A results from mistakenly subtracting the \$20 fee twice: $(110 - 20 - 20) / 15 \approx 4.67$, rounded to 5. Choice B results from forgetting to subtract the \$20 registration fee first and dividing the full \$110 by \$15: $110 / 15 \approx 7.33$, rounded to 7. Choice C results from using \$10 per session instead of \$15 on the post-fee amount: $90 / 10 = 9$.

Question 17 | Geometry

A triangular garden has a base of 10 feet and a height of 6 feet. What is its area?

- A. 60 sq ft
- B. 30 sq ft
- C. 16 sq ft
- D. 32 sq ft

Correct Answer: B

Area = $(1/2)(10)(6) = 30$ sq ft. Choice A forgets the $1/2$ factor: $10 \times 6 = 60$. Choice C adds the base and height instead of multiplying: $10 + 6 = 16$. Choice D results from computing $2 \times (10 + 6) = 32$, a perimeter-style calculation, instead of the triangle area formula.

Question 18 | Geometry — Angles

In a triangle, two of the angles measure 50° and 65° . What is the measure of the third angle?

- A. 65°
- B. 115°
- C. 15°
- D. 55°

Correct Answer: A

The angles of a triangle sum to 180° , so the third angle is $180 - 50 - 65 = 65^\circ$. Choice B is the sum of the two given angles ($50 + 65 = 115$), mistakenly treated as the third angle instead of subtracting that sum from 180° . Choice C results from subtracting the two given angles from each other ($65 - 50 = 15$) instead of subtracting their sum from 180° . Choice D results from an arithmetic slip adding $50 + 65$ as 125 instead of 115, giving $180 - 125 = 55$.

Question 19 | Data Analysis

A survey asked 40 teachers which grade level they prefer to teach: 12 chose elementary, 10 chose middle school, and the rest chose high school. What percent of teachers chose high school?

- A. 30%
- B. 25%
- C. 45%
- D. 55%

Correct Answer: C

High school: $40 - 12 - 10 = 18$ teachers. $18/40 = 0.45 = 45\%$. Choice A is $12/40 = 30\%$, the percentage that chose elementary, not high school. Choice B is $10/40 = 25\%$, the percentage that chose middle school, not high school. Choice D results from adding the elementary and middle school counts ($12 + 10 = 22$) and reporting that as the high school percentage: $22/40 = 55\%$, instead of subtracting them from the total first.

Question 20 | Statistics

A tutor's five students scored 82, 88, 91, 75, and 84 on a quiz. What is the mean score?

- A. 82
- B. 88
- C. 420
- D. 84

Correct Answer: D

Sum = $82 + 88 + 91 + 75 + 84 = 420$. Mean = $420 \div 5 = 84$. Choice A mistakenly reports the first score listed (82) instead of calculating the mean. Choice B is simply one of the five individual scores (88), not the mean of all five. Choice C is the sum of all five scores (420), not divided by the number of students to find the mean.

Question 21 | Order of Operations

What is the value of $(6 + 4) \times 2 - 8 \div 2$?

- A. 6

- B. 10
- C. 16
- D. 12

Correct Answer: C

Parentheses first ($6+4=10$), then multiplication ($10 \times 2=20$), then division ($8 \div 2=4$), then subtraction ($20-4=16$). Choice A results from treating the entire expression as one left-to-right chain, including the final division: $((6+4) \times 2 - 8) \div 2 = 12 \div 2 = 6$. Choice B results from ignoring the parentheses around $(6+4)$ and applying standard order of operations to $6+4 \times 2 - 8 \div 2$: $4 \times 2=8$, $8 \div 2=4$, so $6+8-4=10$. Choice D results from computing $(6+4) \times 2 - 8=12$ but forgetting the final $\div 2$ entirely.

Question 22 | Estimation

Which of the following is the best estimate of 812×48 ?

- A. 32,000
- B. 40,000
- C. 400,000
- D. 4,000

Correct Answer: B

Rounding 812 to 800 and 48 to 50 gives $800 \times 50=40,000$, close to the actual product (38,976). Choice A results from rounding 48 down to 40 instead of up to 50: $800 \times 40=32,000$. Choice C results from rounding 48 up to 500 by mistake (an extra zero): $800 \times 500=400,000$. Choice D results from rounding 812 down to 80 instead of 800 (a misplaced zero): $80 \times 50=4,000$.

Writing

Question 23 | Usage

Identify the segment that contains an error. If there is no error, choose “No mistakes.”

- A. Each of the reports
- B. submitted by the committee members
- C. contain several recommendations.
- D. No mistakes

Correct Answer: C

Segment C contains a subject-verb agreement error. The subject is “each” (singular), and the phrase “of the reports submitted by the committee members” is a modifying phrase that doesn’t change the subject’s number — so the verb should be “contains,” not “contain.” Segment A correctly introduces the singular subject. Segment B is a correctly formed modifying phrase. Since segment C contains a genuine error, “No mistakes” is incorrect.

Question 24 | Usage

Identify the segment that contains an error. If there is no error, choose “No mistakes.”

- A. Whomever scored the highest on the exam
- B. received the award
- C. for academic excellence.
- D. No mistakes

Correct Answer: A

Segment A incorrectly uses “whomever” where “whoever” is required. The pronoun functions as the subject of the verb “scored” within its own clause, so it must take the subject form “whoever,” regardless of the clause’s role in the larger sentence. Segment B is correct. Segment C is correct. Since segment A contains a genuine error, “No mistakes” is incorrect.

Question 25 | Punctuation

Identify the segment that contains an error. If there is no error, choose “No mistakes.”

- A. The teacher carefully reviewed
- B. the students input
- C. before finalizing the grades for the semester.
- D. No mistakes

Correct Answer: B

Segment B is missing an apostrophe: “students input” should be “students’ input” to show that the input belongs to the students. Segment A is correctly worded. Segment C is correct. Since segment B contains the missing-apostrophe error, “No mistakes” is incorrect.

Question 26 | Capitalization

Identify the segment that contains an error. If there is no error, choose “No mistakes.”

- A. The report was submitted to the Ohio Department of Education
- B. after the spring semester,
- C. according to district Policy.
- D. No mistakes

Correct Answer: C

Segment C incorrectly capitalizes “Policy.” Used generically here (not as part of an official, specific title), “policy” should be lowercase. Segment A correctly capitalizes “Ohio Department of Education,” the formal name of a specific state agency. Segment B is correct. Since segment C contains a genuine error, “No mistakes” is incorrect.

Question 27 | Sentence Structure

Which is the best way to combine these two sentences?

“The study had a small sample size. Its conclusions may not apply to the general population.”

- A. The study had a small sample size, its conclusions may not apply to the general population.
- B. The study had a small sample size, and its conclusions may not apply to the general population, this is important to note.
- C. The study had a small sample size, or its conclusions may not apply to the general population.
- D. Because the study had a small sample size, its conclusions may not apply to the general population.

Correct Answer: D

Choice D uses “because” to correctly show the cause-and-effect relationship between the small sample size and the limited applicability of the conclusions. Choice A creates a comma splice by joining two independent clauses with only a comma. Choice B is a run-on that adds an unnecessary, vaguely connected clause (“this is important to note”) on top of a comma splice. Choice C uses “or,” suggesting an alternative rather than a cause-and-effect relationship, which misrepresents the connection between the two ideas.

Question 28 | Spelling

Identify the segment that contains an error. If there is no error, choose “No mistakes.”

- A. The consistant grading policy
- B. applied to every department
- C. at the school.
- D. No mistakes

Correct Answer: A

Segment A misspells “consistent” (correct spelling ends in “-ent,” not “-ant”: c-o-n-s-i-s-t-e-n-t). Segments B and C contain no spelling errors. Because segment A contains a clear spelling error, “No mistakes” is incorrect.

Question 29 | Punctuation

Identify the segment that contains an error. If there is no error, choose “No mistakes.”

- A. Although the meeting ran long,
- B. the committee reached a decision
- C. before the deadline.
- D. No mistakes

Correct Answer: D

The sentence is correctly constructed throughout: segment A closes the introductory dependent clause with a comma, segment B is a correctly formed independent clause, and segment C completes the sentence with a correctly attached prepositional phrase, with no missing or unnecessary punctuation anywhere. Since no segment contains an error, “No mistakes” is the correct choice — not every sentence has a planted error, and recognizing a genuinely correct one matters just as much as spotting real mistakes.

Question 30 | Research & Citation

A student writing a research paper wants to use a statistic from a source but is not quoting it word for word. What is the most appropriate way to handle this in the paper?

- A. Copy the sentence exactly as written in the source, with no citation.
- B. Paraphrase the statistic in the student's own words and cite the source.
- C. Omit the statistic entirely to avoid any citation requirement.
- D. Use the statistic without any indication of where it came from, since it is only a number.

Correct Answer: B

When using information from a source without quoting it directly, the correct approach is to paraphrase it in one's own words and still credit the original source with a citation — this avoids plagiarism while properly crediting the source of the data. Choice A is incorrect on two counts: copying text exactly requires quotation marks, and any borrowed information still requires a citation. Choice C is an overly cautious non-solution that avoids using legitimate source material unnecessarily. Choice D is incorrect because even factual statistics and data drawn from a specific source require a citation to credit that source and allow readers to verify it.
